eVentz

eVentz is my idea for mapping events in a chosen city. eVentz will help manage schedules for a wide gamut of organizers. Typical organizers can be academic institutions conducting classes or a Hotel conducting a conference etc. The web application will have three main sets of users.
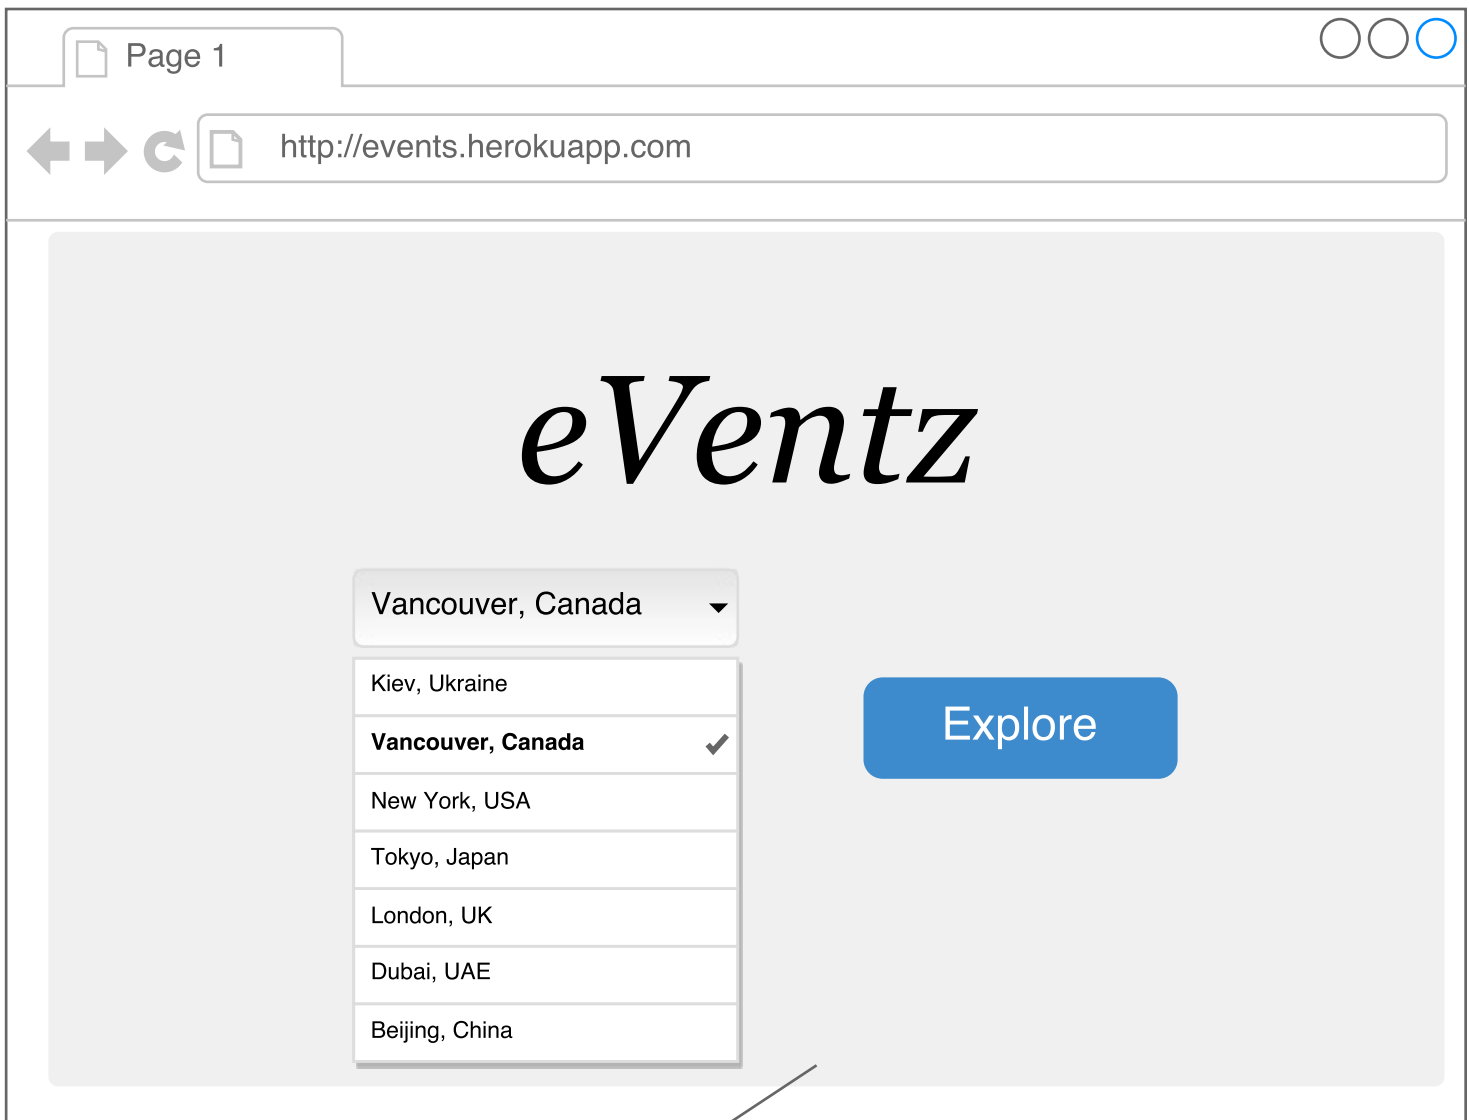

- *General Public or Attendees who are interested in participating in an event*
  - *Browse local events - a google map of all events*
  - *Sign up to participate in an event*
  - *Ability to buy online*
  - *Lookup events based on individual preference*
  - *Get a schedule of events for a certain period (a week to a month) either by printing or google calendar*
- *Organizers who conduct these events*
  - *Sign up to manage events*
  - *Academic institutions, Hotels, Community, Religious, local meetup groups etc*
  - *Organizers can manage scheduling of events based on their infrastructure*
  - *Payments for these events by attendees will be online*
  - *Build events before a peak season or a semester*
  - *Tagging of events to google calendar or printing to a PDF*
  - *Manage proposal and price quotes for speakers of events*
- *Speakers*
  - *Look up events based on personal preferences*
  - *Sign up to participate in events*
  - *Ability to accept or reject an event proposal*
  - *Tagging of events to google calendar or printing to a PDF*
- *Service Provider*
  - *Admin panel to manage users*
 - *Generate statistics on events*

Roadmap:

- *Provide a list of API for scheduling events*
- *Ability to like or dislike events*
- *Forum to discuss on an event*
- *Organizers conduct surveys at the end of an event for feedback*

Proposed Technology Stack (Prototyping and Demo):

S.No	Technology
1	Ruby on Rails
2	Postgresql
3	HTML5
4	Bootstrap
5	Javascript/jQuery
6	AJAX
